## Healthcare Workforce Shortage: A Critical Issue for the Future of Healthcare

The healthcare industry is facing a significant challenge in addressing the current and projected shortage of healthcare professionals.

According to the Association of American Medical Colleges (AAMC), there will be a projected shortage of 122,000 healthcare professionals by 2030.

This shortage is particularly concerning given the projected growth in the elderly population, which is expected to increase from 46 million in 2018 to 88 million by 2050.

The projected shortage of healthcare professionals is likely to have a significant impact on the quality of care provided to patients, particularly those in rural areas and low-income communities.

Addressing this shortage will require a multi-faceted approach, including increased investment in healthcare education and training programs, as well as incentives for healthcare professionals to practice in underserved areas.

It is essential for policymakers, healthcare organizations, and individuals to work together to ensure that the healthcare workforce is adequately prepared to meet the needs of the future.

Only by addressing this critical issue can we ensure that the healthcare system remains accessible, affordable, and effective for all.

It is clear that the healthcare industry must take action now to address the projected shortage of healthcare professionals.

Only by doing so can we ensure that the healthcare system remains accessible, affordable, and effective for all.

Applications are reviewed on a rolling basis until the position is filled.

For more information about the application process, contact the Office of Human Resources at 812-467-4211 or [hr@usi.edu](mailto:hr@usi.edu).

**Job Summary:** The University of Southern Indiana is seeking a highly qualified individual to serve as the Director of Computer Information Services. Reporting to the Vice President for Information Technology, the Director of Computer Information Services oversees the day-to-day operations of the University's computing environment, including the management of computer systems, networks, databases, and related infrastructure. The Director also oversees the development and implementation of new IT systems and processes, and provides leadership and guidance to the IT staff.

**Job Duties:** The Director of Computer Information Services is responsible for managing the University's computing environment, including:

- Overseeing the management of computer systems, networks, databases, and related infrastructure.
- Developing and implementing new IT systems and processes.
- Providing leadership and guidance to the IT staff.
- Ensuring the security and availability of the University's computing resources.
- Maintaining compliance with relevant laws and regulations.

#### Job Requirements:

The ideal candidate will have:

- A Bachelor's degree in Computer Science or related field.
- At least five years of experience in IT management, including experience in network administration, database management, and system maintenance.
- Experience in leading a team of IT professionals.
- Strong communication and problem-solving skills.
- A commitment to excellence and a passion for technology.

For more information about the application process, contact the Office of Human Resources at 812-467-4211 or [hr@usi.edu](mailto:hr@usi.edu).
